Leaders in Incident Response
The Real-Time Risk Platform

The Solace Cyber Real-time Risk Platform offers a unified solution for instant insight into cyber threats impacting your organisation - with actionable intelligence leveraged from multiple feeds.

A 360 degree view of cyber risk in real-time.

The platform presents you with a weighted risk percentage score based on the functional areas Solace Cyber assess. To complement this intel, we provide a monthly cyber security risk report that gives a point-in-time security score status, open risks and the recommended remediation actions.

Microsoft
365

Continuously assess the security posture of your Microsoft 365 tenant, including mail flow hardening, identity security, security recommendations, and historical and real-time malicious activity. Protect and secure any application that makes use of Azure Active Directory.

External
Vulnerability

Monthly external vulnerability assessments provide the means to proactively address vulnerabilities before they can be exploited including software flaws, missing patches, malware, and misconfigurations, across a variety of operating systems, devices, and applications.

Phishing
Risk

A report that helps you assess the actual level of your organisation's susceptibility to phishing and other malicious email types. This feature can assist in refining your staff's awareness and bolstering your overall security posture.

MFA
Assessment

The Multi-Factor Authentication Assessment is an embedded IT security tool that helps you gauge the strength of your organisation's MFA security provision whilst identifying specific risks, which allows you to better defend against MFA hacks.

Back Up &
Disaster Recovery

A disaster recovery plan includes policies and software to maintain business continuity during security incidents. The real-time risk platform assesses your existing plans and provides guidance on how to maximinse their effectiveness.

Remote Worker
Security

With 75% of employees working remotely and some never visiting the office, organisations need measures to ensure remote access security as well as regular reporting to verify the continued safety of access points.

Firewalls

To minimise unexpected downtime, it's essential you perform routine maintenance to ensure your systems operate effectively. We conduct firewall testing to assess whether it permits or restricts specific traffic and evaluate its impact on latency.

360 DEGREE VIEW

Complete visibility of every cyber risk, with threat intelligence and monitoring.

UK INNOVATION

Developed by UK-based cyber security experts.

COMPLIMENTARY

Access the platform free of charge, only pay when you use our services.

Real-Time
Risk Scoring

The platform presents you with a weighted risk percentage score, derived from the evaluation of different facets of your business. The technology actively seeks opportunities to enhance this score and offers convenient access to Solace Cyber for insights into potential investments.
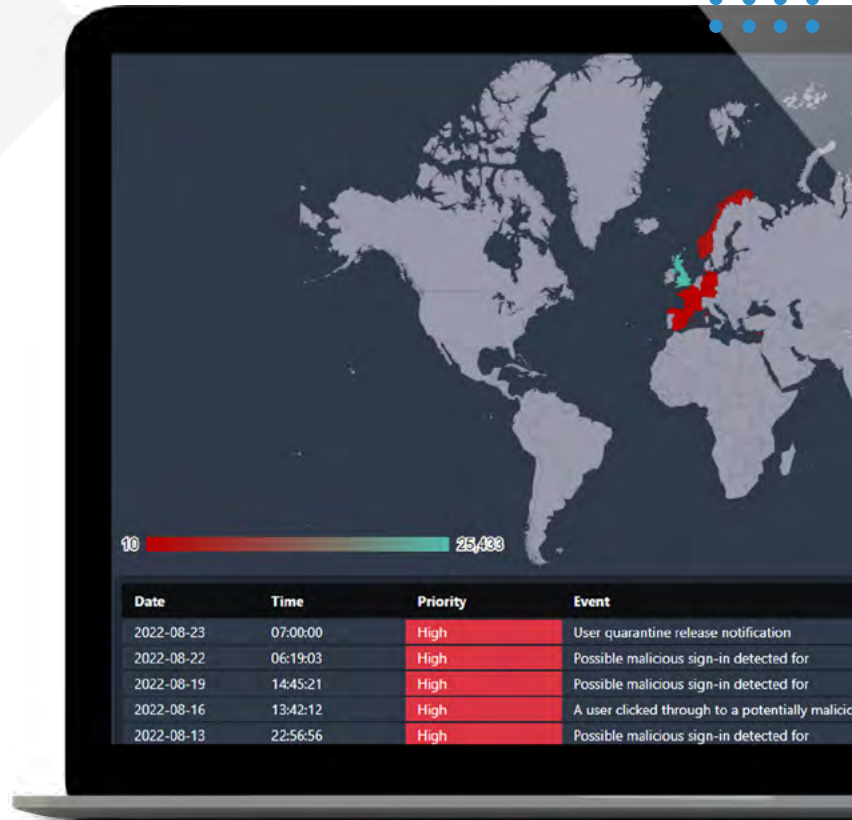

Simultaneously, it identifies any deterioration in your security posture attributable to emerging risks, allowing you to address known vulnerabilities faster.

Integrated
Data Feeds

Data is abundant amongst the many cyber security solutions available, but monitoring the feeds can be time-consuming, which leaves a margin for error if data is misinterpreted.

The Solace Cyber Real-time Risk Platform combines multiple data feeds into a single dashboard, so you can detect and react to cyber threats faster.

The dashboard has been designed for accessibility by both executive users and IT engineers. Executives can gain comprehensive insights into their organisation's cyber risks without requiring technical expertise, while IT teams can optimise their cybersecurity workflows by effortlessly accessing cyber threat intelligence and data analytics.

Date	Time	Priority	Event
2022-08-23	07:00:00	High	User quarantine release notification
2022-08-22	06:19:03	High	Possible malicious sign-in detected for
